AN ENLARGEMENT ENHANCES YOUR FAVOURITE SNAPSHOT

An enlargement will turn any good snapshot into a beautiful work of art. The cost is trifling compared with the satisfaction and pleasure that you receive when you see the result.

Enlargements are either black-and-white or sepia-toned on glossy, matte, smooth, silk or fine grain surfaces, to your taste.

Framing should be considered too—a framed enlargement makes a charming decoration for the home or a splendid present for a friend or relative.

KODAK FILM IS MADE IN AUSTRALIA

to suit Australian requirements—based on the newest achievements of Kodak Research Laboratories all over the world.

KODAK FILM OFFERS YOU THE ADVANTAGE

of this world-wide advanced research with every spool

KODAK VERICHROME FILM —

famous the world over as the film that gets the picture!—double-coated to double-guard every snapshot. Highly colour sensitive to Nature's colours, thus giving snapshots that live! And its speed represents reserve picture-making power.

KODAK PANCHROMATIC FILMS —

films of panchromatic quality that enable snapshots to be made under the most adverse light conditions. Superlative for pictures by artificial light. Fully panchromatic with balanced colour sensitivity. Made in two speeds.
