 The Registrar reported,

That since the Gallery was finished the Cases of Minerals had been removed to the Gallery - other cases are urgently required

in which to put away over 1000 Specimens
 The Rev. Dr. Hensdale had delivered a lecture on the 5th August on Meteorology, about 200 persons being present. That gentleman had kindly promised to cause the School to be supplied with a specimen of a case, suitable for Minerals: its size would be 4.5" x 2.0" - about 60ft. lin. of such cases will be wanted.

It is suggested that the Window at the West/Pront/End of the Building be utilized for light, by removing a portion of the plaster &c.

Additional Class room is needed: it is suggested that a screen be made for use in dividing the Lecture Hall, so as to render it available for 2 classes simultaneously held. A few extra Gas lights with reflectors will be required, beyond the ordinary furniture: it is likewise suggested that on each side of the Lecture Hall two or more of the small rooms be thrown into each other so as to form other, commodious Class rooms, which are absolutely needed for the following Classes, viz. In Keckan. Requiring Mining & Land Surveying & Mathematics.

Mr Sanson Keast had taken charge of the Class first named, consequent on the resignation of Mr. Jonathan Robinson.

It is suggested that the following Accounts be opened at the Bank viz. Deposit a/c into which all monies received as lodgments &c be paid

Assistance a/c into wh. monies passed by this Council for purchases &c in London can be paid to meet Drafts drawn
