DEPARTMENT OF DEFENCE

INDEX OF AUSTRALIAN DEFENCE (DEF(AUST)) STANDARDS

MARCH, 1987

The Index of Australian Defence (DEF(AUST)) Standards is issued by the Defence Standardisation Committee under the authority of the Defence Industry Committee.

LISTING

1. General This index consists of four parts viz:

Numerical index A numerical listing of current superseded and cancelled standards which also provides details of the status, date of issue and the NSC (NATO Supply Class).

Alphabetical Index An alphabetical listing, by title, of current and cancelled standards. Reference to the numerical listing will be necessary to establish the status of the listed standard.

NSC (NATO Supply Class) Index In course of preparation.

Draft Standards Index An alphabetical listing of current draft standards (DR) of Defence Purchase Descriptions (DPD DR).

2. Companion Documents These documents, which have the letters "CD" prefixing their identification number, will appear at the start of the listing. They are DEF(AUST) Standards intended to be read in conjunction with an adopted standard from another source.

3. Metricated Documents Early documents revised to incorporate metric units are renumbered by adding "5000" to the original number (eg DEF(AUST)229 became DEF(AUST)5229 and DEF(AUST)3008 became DEF(AUST)8008).

4. Revised Documents When documents are revised they are republished with the same number but with the addition of a suffix letter - A, B, C, etc. Hence DEF(AUST)4B supersedes DEF(AUST)4A. No reference to such superseded documents is made in this index. The exception to this rule applies when the revision implements the metrication of units. In such cases, the last pre-metric version remains listed and is designated 'superseded' and reference to this superseding document is provided.

5. Symbols The following symbols may appear to the left of the document number:

SYMBOL	MEANING
c	Indicates that this document has been cancelled. Replacement advice is included where applicable.
n	Indicates that microcopy of this document is not available.
s	Indicates that this DEF(AUST) has been superseded by the nominated document.
Q	Indicates that the document requires product qualification under the terms and conditions of DEF(AUST)525.

6. DEF(AUST) documents, including this index, are now available as both microfiche and hard copy. Documents in either form may be obtained from the sources listed below:
