WEAPONS TARGET

500th

**PRODUCTION
AIRCRAFT**

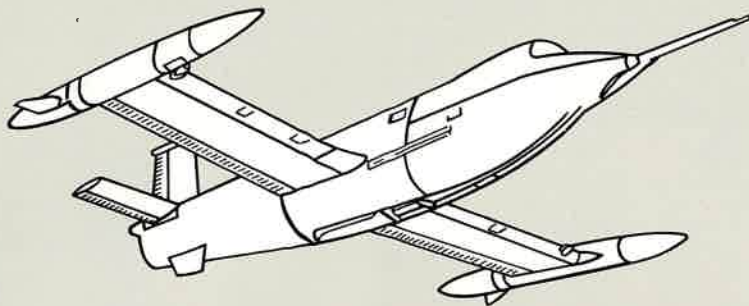

Constant Development

GAF welcomes guests to Avalon Airfield for this significant occasion — the handover of A92-815, the 500th JINDIVIK. A92-815 is one of the current order of Jindivik Mk4A aircraft for the United Kingdom Ministry of Defence. This aircraft will be packaged with A92-815 for sea transport to the operating range in the UK, RAE Llanbedr, Wales.

The aircraft you see today is only the latest in the long production of Jindivik following the first delivery in October 1951. Thirty-five years of Jindivik production have so far seen a total of 500 aircraft delivered to customers WRE, RAE Llanbedr, RAN, USN and the Swedish Air Board. Continuous development through eight versions has kept Jindivik at the forefront of Target Aircraft capability.

Jindiviks achievements are impressive. On a number of occasions Jindivik has been "wounded" in action — but like a homing pigeon has managed to return to base. The reliability of Jindivik continues to improve, with several aircraft having flown more than 250 flights. In the last three years, almost 700 flights have resulted in the loss of only two aircraft not attributed to missile strikes. Only eight aircraft in total have been lost in the last three years. When these figures are compared with initial expectations of about ten sorties per aircraft, Jindivik has certainly proved to be an amazing aircraft.

Keeping Jindivik in the forefront of Target Aircraft, developments to further improve capability and customer acceptance are currently being implemented.

SOUVENIR PROGRAMME

Guests are requested to be seated by 12.00pm

Official Guests

Mr. Lionel B. Woodward
Chief of Defence Production

Dr. Roger Allen
Head of Staff, British Defence Research & Supply Staff

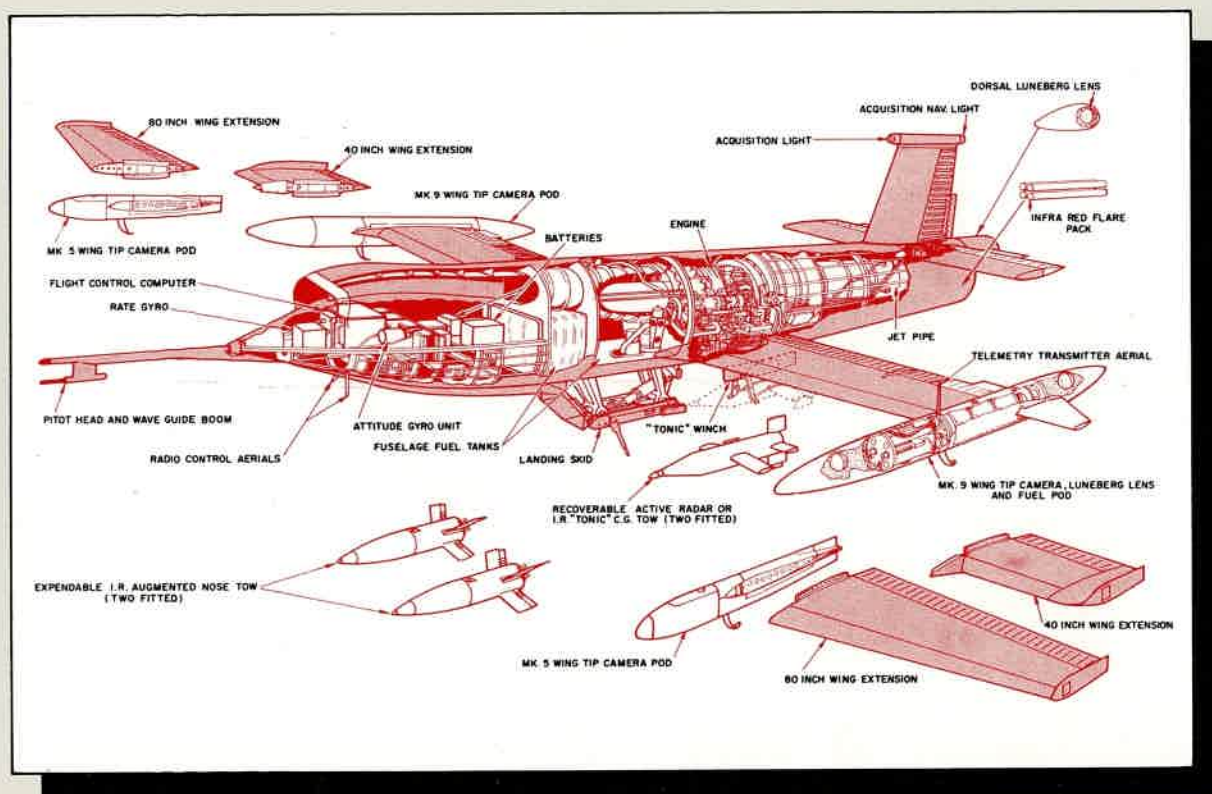

Mr. David Main
