EURO CARGO IVECO

Stunning design, cutting-edge technology and the highest specifications -

Iveco has set a new benchmark for the medium-duty truck market with the release of the brilliant New EuroCargo.

Five New EuroCargo models share a stunning new cabin exterior and interior, cutting-edge technology and a level of standard equipment operators only found in luxury heavy duty trucks.

The world famous design house of Stile Bertone created the stunning and functional New EuroCargo cabin. Its design raises the level of style and function for vehicles in this category. The truck's appeal is expanded by the addition of an optional medium-roof sleeper cab on two models. It adds to the experience by giving drivers a complete and professional work environment that allows them

to stand up and walk around – a convenience that is rarely found in any category. Iveco now has the widest range of cab options in the medium duty segment with a day, sleeper and medium-roof sleeper.

The New EuroCargo's design brief focused upon minimizing driver effort and

downtime. The fluid levels are checked electronically and indicated via the dashboard display each time the ignition is engaged. And tilting of the cab no longer involves lifting the radiator grille. Driver effort is also reduced on the sub-12-tonne models, which have just one step, of only 57 centimetres from the ground.

The all new instrument fascia is also stunning. State-of-the-art ergonomics, colourful layout and cutting-edge electronics use a combination of analogue gauges and

LCD displays to indicate the complete operational status of the truck, including maintenance and diagnostic information. It's the sort of dashboard normally found in a luxury car.

The New EuroCargo powertrain is more than capable. The high-torque-at-low-revs 24-valve 5.9-litre Iveco Tector engine powers the entire range. With ratings of 210/240/280 hp, these engines provide leading levels in power, responsiveness, efficiency and emission ratings. Upgraded six and nine-speed Iveco transmissions have new synchronisers and gear linkages for smoother more rapid gear shifts. A pneumatic servo-shift, for reduced pedal effort, is also standard.

"New EuroCargo brings the best design, technology, equipment and power to the medium-duty segment - and Iveco continues its claim as the 'best in class'".

The New EuroCargo confirms Iveco as the premium provider of all types of commercial vehicles.

"Australia has not yet seen a medium-duty truck with this level of design, technology and innovation as standard equipment. It signals the beginning of the complete change of Iveco models in Australia and will put the Iveco name on the lips of everyone that talks about product style, innovation and leadership," says Iveco Trucks Australia Limited General Manager Sales & Marketing Peter Langworthy.
