

EUROTRAM

Yarra Trams and Bombardier are pleased to demonstrate the award winning Eurotram to the people of Melbourne. This striking, state of the art light rail vehicle shows what it is possible to do with public transport – we think it looks great and hope you agree.

Recently passed legislation means that all public transport must be accessible to the disabled, with the entire fleet accessible by 2020. As a result, over the coming years the majority of Melbourne's trams will need to be replaced with low floor style recently introduced.

If Bombardier were to supply new trams for Melbourne in the future, we would build them here in Australia at our Dandenong factory. Bombardier Transportation is the largest manufacturer of rail vehicles in the world.

Porto Eurotram

Length:	35m
Width:	2.65m
Passengers:	
Seated:	80
Total:	370
Doors:	12
	(6 per side)

The Eurotram running in Melbourne is on loan from the city of Porto in Portugal. Bombardier is manufacturing 72 Eurotrams for this project.
